

Sirco PS-10 Pump Station

Sirco PS-10 Pump Station with 1447 Cansiters

Sirco Industrial provides Pump Stations from the PS-10 at 5 to 10 gpm up to the PS-80 for flows from 50 to 80 gpm. The Pump Stations have integral filter chambers to allow bag or cartridge filtration, and are available as dual pump units when necessary. The panels provide power disconnects, level and fill controls and water quality measurement and alarms. These rugged systems are assembled with corrosion resistant components, NEMA control enclosures, High Head Grundfos stainless steel pumps mounted on polypropylene decks and schedule 80 PVC plumbing components. All Systems are custom built to customer's requirements and are suitable for many different water treatment applications.

Accessories include Ozone sterilization, flow monitoring and dual range TDS or Restivity monitoring instrumentation. All frames are powder coated welded steel with stainless steel fittings.

Sirco Industrial has exchange canisters up to 30 cubic ft. capacity for 5 gpm up to 100 gpm flow.
